

AUTOMOTIVE

African Specialist Polymers (Pty) Ltd recognises the need for a purpose inspired specialist coatings supplier who can service both the Southern African and African markets. The company provides specifications and solutions for various market sectors including the AUTOMOTIVE industry.

Automotive environments are highly demanding and often vast in area. The floors in an AUTOMOTIVE facility are required to be durable and robust, being able to withstand the abuse of forklift and other wheeled traffic and oil, grease and chemical spillages. They need to offer slip and impact resistance and must be easy to clean and maintain.

African Specialist Polymers offers a range of high quality, performance orientated epoxy, polyurethane and methyl methacrylate systems of various thicknesses that are specifically formulated to meet the requirements of this highly demanding environment. These systems are extremely hardwearing, offering excellent chemical, impact and slip resistance, transforming the area into a clean and safe workspace.

Our expertise ranges from understanding our customers' needs, product and system formulating, to onsite technical support and commercial experience ensuring that your project is of world class standards and an investment to be proud of.

 Seamless hygienic finish

 Easy to clean

 Slip resistant

 Food safe, solvent free, odourless, non-tainting and non-dusting

 Provides excellent chemical resistance

 Thermal shock resistant

 Excellent durability and impact resistance
